EXAM PROFESSIONAL MACHINE LEARNING ENGINEER TOPIC 1 QUESTION 26 DISCUSSIO..

Actual exam question from Google's Professional Machine Learning Engineer
Question #: 26
Topic #: 1
[All Professional Machine Learning Engineer Questions]

You are responsible for building a unified analytics environment across a variety of on-premises data marts. Your company is experiencing data quality and security challenges when integrating data across the servers, caused by the use of a wide range of disconnected tools and temporary solutions. You need a fully managed, cloud-native data integration service that will lower the total cost of work and reduce repetitive work. Some members on your team prefer a codeless interface for building Extract, Transform, Load (ETL) process. Which service should you use?

A. Dataflow

B. Dataprep

C. Apache Flink

D. Cloud Data Fusion

D.
Datafusion is more designed for data ingestion from one source to another one, with few transformation. Dataprep is more designed for data preparation (as its name means), data cleaning, new column creation, splitting column. Dataprep also provide insight of the data for helping you in your recipes.

D. Dataprep would also work but Data Fusion is better suited.
(See https://stackoverflow.com/questions/58175386/can-google-data-fusion-make-the-same-data-cleaning-than-dataprep)

B. Dataprep makes use of Apache beam, which can process streaming and batch, and thus prevent training-serving skew.
