EXAM PROFESSIONAL MACHINE LEARNING ENGINEER TOPIC 1 QUESTION 66 DISCUSSIO..

Actual exam question from Google's Professional Machine Learning Engineer

Question #: 66

Topic #: 1

[\[All Professional Machine Learning Engineer Questions\]](#)

Your data science team is training a PyTorch model for image classification based on a pre-trained ResNet model. You need to perform hyperparameter tuning to optimize for several parameters. What should you do?

- A. Convert the model to a Keras model, and run a Keras Tuner job.
- B. Run a hyperparameter tuning job on AI Platform using custom containers.
- C. Create a Kuberflow Pipelines instance, and run a hyperparameter tuning job on Katib.
- D. Convert the model to a TensorFlow model, and run a hyperparameter tuning job on AI Platform.

Selected Answer: B

B because Vertex AI supports custom models hyperparameter tuning

Selected Answer: B

C:

Don't wast your time to convert to other framework, you can use it on custom container absolutely.

I insist on B, At the present, it seem like we can use prebuilt container instead of custom container, but none of the 4 choice, so B is the most likely way out of this question.

Selected Answer: B

ans: B

A, D => too much work.

C => not sure why you would complicate so much when Vertex AI has this feature in custom containers.

Why use a thrid-party tool when Vertex AI already let you tuning hyperparameters in custom containers? I think it's B
